#### Loh et al, NEJM 1997

# Heart failure and thromboembolic risk

Hypotheses:

- deceleration of peripheral and intracardiac blood flow due to peripheral congestion and impaired cardiac contractility
- endothelial dysfunction (impaired NO response)
- prolonged bed rest in severely ill cases
- the presence of coagulation defects as, for example, in the case of ventricular assist devices

# **VKA** limitations

- Intra- and interpatient variability in dose response
- susceptibility to drug-drug and drug-food interactions
- narrow therapeutic index necessitate periodic monitoring of physiologic response to warfarin using the international normalized ratio (INR)

### HF and VKA: the bleeding risk

Table 3 Predictors of stable INR control status (c-statistic = 0.69)

Di Marco et al, Am Heart J 2005

### In summary Disadvantages of HF patients in therapy with VKA HAS-BLED score

- Multiple drugs
- More frequent hepatic

and renal dysfunction

• Greater INR lability

Condition	Points
H - Hypertension	1
A - Abnormal renal or liver function	
(1 point each)	1 or 2
S - Stroke	1
B - Bleeding	1
L - Labile INRs	1
E - Elderly (> 65 years)	1
D - Drugs or alcohol (1 point each)	1 or 2

## What about DOACs?

	RE-LY	Rocket-AF	Aristotle	Engage AF TIMI
Agent (mechanism of action)	Dabigatran (direct thrombin inhibitor)	Rivaroxaban (direct inhibitor of activated factor X)	Apixaban (direct inhibitor of activated factor X)	Edoxaban (direct inhibitor of activated factor X)
NOAC dose	150 mg or 110 mg	20 mg once daily	5 mg twice daily	60 mg or 30 mg once daily
	twice daily			In both groups the dose was halved in patients who had any of the following criteria:estimated CrCl 30-5 ml/ min, body weight ≤60 kg or concomitant use of verapamil or quinidine
Patients (n)	18,113	14,264	18,201	21,105
Renal function exclusion CG criteria)	<30 ml/min/1.73 m2	<30 ml/min/1.73 m2	<25 ml/min/1.73 m2	<30 ml/min/1.73 m2
Safety and efficacy of NOAC in comparison to warfarin	150 mg dose:lower rates of stroke and systemic embolism and similar rates of major haemorrhage 110 mg dose:similar rates of stroke and less major bleeding	Similar rates of stroke and major bleeding	Less stroke and major bleeding	Both doses:similar rates of stroke with less major bleeding

Xiong et al, European Journal of Heart Failure 2015

### Heart failure and sinus rhythm?

Rationale:

- deceleration of peripheral and intracardiac blood flow due to peripheral congestion and impaired cardiac contractility
- prolonged bed rest in severely ill cases
- endothelial dysfunction (impaired NO response)
- the presence of coagulation defects as, for example, in the case of ventricular assist devices
- increased risk for misdiagnosed atrial fibrillation

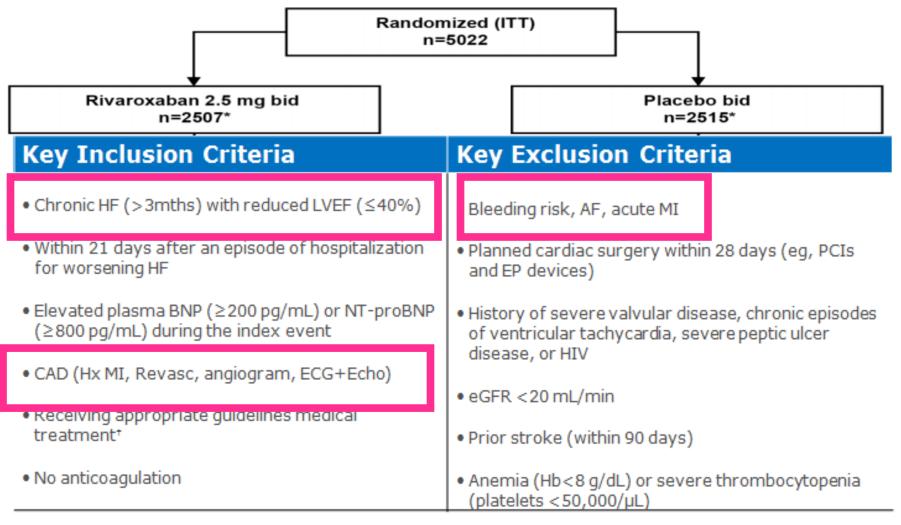

# Warfarin has failed to demonstrate improved outcomes in pts with HF and SR

- 1. Cleland JGF, et al. Am Heart J. 2004.
- 2. Massie BM, et al. Circulation. 2009
- 3. Homma S et al, N Engl J Med. 2012.

### **COMMANDER HF**

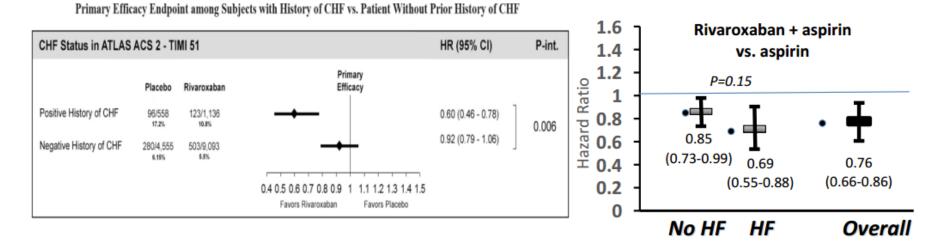

### Rationale for the Commander HF design

COMPASS

Branch et al, Circulation 2019

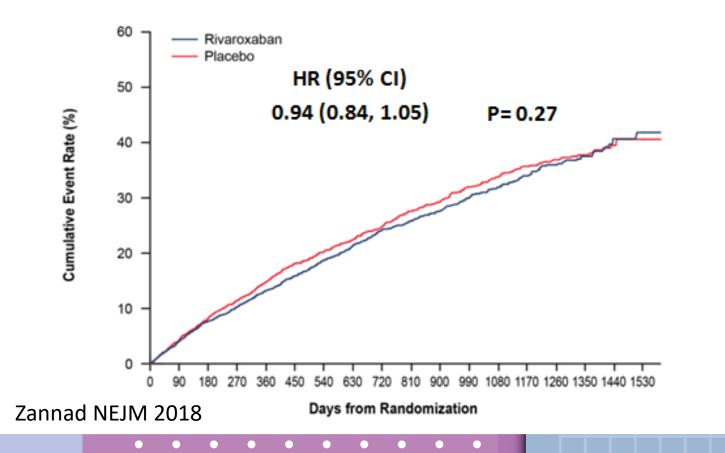

#### COMMANDER HF

## **Primary Efficacy Outcome** (ITT, All-cause mortality, MI, or stroke)

### **COMMANDER HF:** safety outcomes

_potential for permanent						
disability						
ISTH major bleeding	82 (3.3)	2.04	50 (2.0)	1.21	1.68 (1.18, 2.39)	0.003
ISTH: HGB decreases ≥2g/dL	55 (2.2)	1.37	30 (1.2)	0.73	1.87 (1.20, 2.91)	0.005
ISTH: transfusions ≥2 Units	31 (1.2)	0.77	18 (0.7)	0.43	1.74 (0.98, 3.12)	0.058
ISTH: critical bleeding sites	25 (1.0)	0.62	23 (0.9)	0.56	1.12 (0.63, 1.97)	0.699
ISTH: fatal outcome	3 (0.1)	0.07	7 (0.3)	0.17	0.45 (0.12, 1.72)	0.228
Bleeding requiring hospitalization	61 (2.4)	1.52	48 (1.9)	1.16	1.30 (0.89, 1.90)	0.170

In patients with recent worsening of chronic HF and reduced ejection fraction who also have underlying CAD and are not in AF, low-dose rivaroxaban, when added to guideline-based therapy, does not improve the composite of all-cause mortality, MI, or stroke, nor does it favorably influence HF rehospitalization

### Take home messages

- Thromboembolic risk increases with the worsening of HF
- In patients with both NVAF and HF all DOACs demonstrated the same efficacy/safety profile showed in the overall populations
- To date in patients with HF without AF the anticoagulation therapy did not prove benefit in prevention of ischemic events and death
